Key features & benefits

Casio's V-R EPOS range has a model suitable for all applications including hospitality and retail environments. Here you can understand the key benefits and features of each EPOS solution.

Android-based operating system

With a quick return to operation after any power interruptions, Casio's EPOS solutions support daily 24/7 front of house operation using a reliable Android-based platform.

Ease of use

Simple to use, wide LCD touch panel enables users to work quickly and effectively, supporting efficient high-speed operation.

Low power consumption

Power consumption is incredibly low compared to conventional POS systems, increasing power savings as well as boosting green credentials.

Design

Stylish and attractive design enables the till to fit in any interior scheme.

Casio Cloud Suite

All of the Casio V-R terminals are compatible with our optional, sophisticated and comprehensive Cloud-based back office system. This enables you to keep your tills up-to-date with the latest prices, promotions and staff information, as well as capture and analyse incoming data.

V-R Series

V-R200

The V-R200 is a highly refined, all-in-one EPOS terminal that embodies a full range of advanced capabilities, such as table management. While having a compact stylish design, the 10.4 inch LCD terminal is equipped with a high speed printer and a pop-up customer display resulting in space-saving, ease of operation and excellent functionality. In addition, the V-R200 is water and dust resistant with extremely low power consumption, significantly contributing to power savings compared to traditional POS systems and therefore reducing overall running costs.

- Industry-leading Android-based platform
- Sophisticated, elegant design
- Integrated thermal printer
- Adjustable 10.4" touch screen
- Fully customisable EPOS application
- Compact, small footprint
- Optional Casio Cloud Suite
- Low power consumption

Printer	Built-in
Platform	Android 4.2.2
Dimensions (W x D x H)	395 x 237 x 229 mm

Perfect for Hospitality environments

The V-R200 is the ideal budget-friendly and extremely compact all-in-one EPOS terminal. With its integrated printer and pop-up customer display, it is perfect for limited counter spaces in any hospitality environment. V-R200 runs the very latest Casio EPOS application with sophisticated features such as interactive table layouts, scheduled price changes and advanced reporting as standard. For dining establishments, the application makes it easy to manage the entire meal process from order taking to kitchen preparation. The stylish and glossy design helps the V-R200 fit seamlessly into any hospitality environment.

V-R200

V-R7000

The V-R7000 is the perfect terminal for more traditional hospitality EPOS environments, ideal for bars, pubs and restaurants. The 15.6 inch, highly responsive, widescreen display is adjustable to any angle to suit any environment. The V-R7000 runs the same sophisticated EPOS software as the V-R200 but has more screen space available to display product choices and table layouts. The IP53 rating for water and dust resistance gives the terminal the resilience to survive in challenging environments.

Hospitality environments

Pubs

In a pub, fast service can be the difference between a satisfied customer or not, affecting whether they are likely to return. The V-R touch screen interface tills are easy to use and quick to respond, meaning your staff will be able to search for and register items much faster than ever before. The screen is water splash and dust resistant to the IP53 standard - meaning that day to day spillages and cleaning are not a problem, keeping up with the demands of a busy pub environment.

Coffee Shops

The V-R EPOS tills offer an excellent solution for coffee shops. Due to its quick set up and easy maintenance, the V-R tills are ideal hassle-free products when making the move from an iPad POS to a cash register. While offering reliable daily front-of-house operation, Casio tills achieve incredibly low power consumption. This means you never have to worry about the constant use over 7 days a week.

Restaurants

Each V-R till is fully equipped for all restaurant businesses. Features such as seamless check handling, Dallas Key support for easy staff sign-on, easy-to-use Mix & Match function and price scheduling are advantageous assets that ensure a smooth and efficient running of your restaurant business. Furthermore, the V-R tills have some of the most sophisticated table management features in the industry.

Perfect for Retail environments

The V-R200 is the ideal entry-level EPOS terminal for small to medium retail stores, including multi-branch organisations. A whole range of stores would benefit from using the V-R200 due to its compact size, ease-of-use and quick set up process. Furthermore, the use of the optional, comprehensive Cloud-based back office makes daily administration tasks very easy to manage.

The V-R200 offers connection facilities for barcode scanners. If the majority of your products are barcoded, making the move to scanning will drastically improve efficiency. Scanning helps you to eliminate errors at the point of entry on the till, ensuring over or undercharging customers never happens. The comprehensive and intuitive Casio application accurately applies special offers and discounts easily, making the V-R200 perfect for the constantly evolving retail industry.

The V-R7000 makes daily, routine tasks, such as pricing control and 'cashing up' much quicker and more accurate. With the use of the Casio Cloud Suite, managers can access vital business information such as sales data and customer information. Similar to the V-R200, the V-R7000 enables barcode scanning of products making the POS experience faster for staff and customers. Furthermore, with excellent reporting functionality in the Cloud, you can keep up to date on store performance from anywhere, at any time, on any internet enabled device.

Casio Cloud Suite

With each of Casio's V-R EPOS tills you can enjoy an optional, sophisticated and comprehensive Cloud-based back office system. The Casio Cloud Suite will not only help you to keep your tills up to-date with the latest prices, promotions and staff information but also to capture and analyse the data that flows into your EPOS system.

Data capture and spotting trends

Sales data is transmitted to the Cloud in near real-time giving you total power and control over your data.

In addition, with our optional Dashboard module, you can bring up a customised display showing the top-selling products yesterday, last week, last year or any period you care to specify. Alternatively, you can display a graph showing who your best performing clerk is for a particular week. These are just some of the possibilities the Dashboard gives you for keeping up to speed with how your business is performing.

Up-to-date tills

Have you added items to your menu? Have you replaced a member of staff? With the Casio Cloud Suite you can make these changes and more by using any browser-capable device and logging in to your own secure pages. Once you have made the changes, you simply need to check for updates on the relevant tills and they will be instantly applied.

Available modules

Core

This module enables basic but essential product maintenance and sales reporting to support day to day business decisions.

Mix & Match

This module allows special promotions to be set up in the Cloud and subsequently downloaded to the tills in one or many locations.

Cashing Up

This module gives the ability to manage the cash in your business by allowing the declaration of cash amounts. It ensures that the declared amount and bank reconciliation is accurate, which can be easily verified by your online banking facility.

Stock Control

This module gives accurate stock levels along with stock costs. Stock can be managed in real-time, including placing orders with suppliers.

PubCo Reporting

This module is designed to email the area manager / head office a one page report on a periodical basis (e.g. daily, weekly, etc.)

Time and Attendance

This module manages staff punctuality, rest breaks and hours worked, all accessible through any internet-enabled device. This allows the accurate management of staff costs and efficiency during busy and quiet trading periods.

Dashboard

This module gives you access to a customisable screen of reports for a quick snapshot of how your business is performing.
