## Easy-to-operate 10.4-inch LCD

---

The highly legible, easy-to-use touch panel supports efficient customer check-out.

## Intuitive Large-Screen Touch Panel LCD

---

The main display is a 10.4-inch large-screen touch panel LCD. A highly sensitive touch panel supports high-speed operation. The display delivers quick response time for fast check-outs so customers aren't kept waiting even during peak sales periods.

## IP53-compliant environmental durability (Display area only)

---

The terminal has an IP53 rating for water resistance and dust resistance\*. The touch panel screen can be operated even with wet hands and is suitable for use at restaurants and other businesses where water is used.

\*Protected from water spray less than 60 degrees from vertical.

## A Suite of Applications to Increase Shop Management Efficiency

---

### Advantages of Adopting the Android™ OS

---

An easy-to-understand user interface supports centralized management of sales, customer, and reservation data. Android flexibly meets wide-ranging management needs by supporting the development of original software applications.

### Blends in harmoniously with sophisticated interiors

---

A highly refined, stylish design that embodies advancement.

### A sophisticated, elegant design

---

A stylish shape featuring simple straight lines and use of an attractive glossy material for the front panel frame and printer cover result in a tasteful design that harmonizes with shop interiors.

## All-in-one product design for superb functionality

---

The terminal is compact and is equipped with a high-speed printer and pop-up customer sub-display with adjustable background color. The result is a space-saving, fully integrated design that provides excellent functionality.

### Specifications that offer a variety of installation options

---

The terminal has a small footprint, measuring only 395 mm wide, 237 mm deep, and 229 mm high. Since the terminal and cash drawer can be installed in separate locations, the system can be adapted easily to changes in shop layout.

### Loaded with advanced specifications

---

CPU, memory capacity, printer speed, and ease of operation that take functionality to a new level.

### Advanced specifications and operability

---

The terminal offers greatly improved specifications compared to the previous CASIO model, such as a 1.5 GHz high-speed dual-core processor and 1 GB of memory. Switch specifications have also been modified for more comfortable operation.

\*V-R100

### Power-saving design contributes to low-cost operation

---

Limiting power consumption during operation to approximately 18 watts and standby power to approximately 12 watts provides greater power saving than ordinary PC POS systems, contributing to running cost reduction.

## User-friendly, high-speed printer

---

The auto-cutter eliminates the time and effort of tearing off receipts by hand.

Simply drop in the paper roll and lower the platen arm.

The terminal is equipped with a quiet, high-speed thermal printer that accepts 58 mm and 80 mm paper rolls. Drop-in paper loading facilitates paper roll change so customers aren't made to wait even when the shop is crowded.

## Connection with External Systems for Greater Operating Efficiency

---

The terminal is equipped with a wired LAN terminal and RS-232C terminal to increase the operating efficiency through linkage with a variety of systems, such as order entry systems that realize efficient purchase ordering. The terminal also has a memory card slot for storage of sales data on SD memory cards.

## Excellent system stability, including rapid fault recovery, and support for worry-free, user-friendly operation

---

Unlike PC-based POS systems that run software on PC operating systems, the starts up quickly when switched on. Since the terminal has no hard disk, even if there is a sudden disruption in power supply, data is saved and reflected when the system is restarted. The system is highly robust and capable of rapid recovery even if it goes in a power outage.
